Growth, Oscillation and Comparison Theorems for Second ...

This paper studies homogeneous and nonhomogeneous second order linear difference equations. Comparison theorems based on the coefficients are proven for the homogeneous equation. Existence of so called r -type solutions for the forced equation is established. Oscillation and nonoscillation properties of the forced equation based on the forcing

What's the difference between an initial value problem and ...

What's the difference between an initial value problem and a boundary value problem? Where in boundary value problem the end points are non zero element means at $t=0$ the conditions given will called the boundary value problems. For Example, What's the difference between an initial value problem and finding the particular solution? 2.

Asymptotic problems for fourth-order nonlinear ...

Open problem It is an open problem to find conditions for the solvability of boundary value problem (1), (3), (4) in case $r(t) < 0$ and (2) is oscillatory. In view of Theorem 2, Corollary 2 and Proposition 1, it is a question whether (1) can have vanishing at infinity solutions in case $r(t) > 0$ and (2) is oscillatory.
